To listen to **KTNA FM** online:

If you have a **PC**, your default audio player is usually Windows Media or Real Player.

When you click on **Listen Online**, you get to a pls file (listen.pls).

Right click to open the pls file in a particular program (whatever your default audio player is). Direct it to SAVE the file in that player.

If you have a **Mac**, your default audio player is usually iTunes. The listen.pls file should open automatically with iTunes.

PLS (file format)

From Wikipedia, the free encyclopedia

Playlist

Filename extension	`.pls`
Internet media type	`audio/x-scpls`
Type of format	Playlist

PLS is a computer file format that stores multimedia playlists. It is a more expressive format than basic M3U, as it can store (cache) information on the song title and length (this is supported in extended M3U only). With PLS version 2, playlists also include a PLS version declaration.

iTunes, QuickTime Player, RealPlayer, Winamp, AIMP, XBMC, XMPlay, VLC media player, popular GNU/Linux media player Rhythmbox, and foobar2000 are able to interpret PLS files.[*citation needed*] Media Player Classic with the K-Lite codec installed does work with PLS format but still requires the appropriate MIME or file extension associations.
